High performance. Delivered.

Accenture Life & Annuity Analytics Series: New Business and Underwriting Demo
Video/Podcast Transcript

Welcome to Accenture Life & Annuity Analytics, the first analytics solution designed specifically for life and annuity carriers. Accenture Life & Annuity Analytics provides a suite of powerful insights across 5 industry domains that can help drive better outcomes for your business.

In this video we'll explore the New Business and Underwriting domain which can help you improve application efficiency and customer experience.

Let's look at the Requirements Analysis Dashboard, which tracks end-to-end requirements timing. The chart shows the different types of requirements and collective duration of requirement generation, ordering, results and review.

Here you see that the Paramedical exam takes the most time to resolve. By clicking on it, you see that exams ordered manually by an Agent take longer than exams ordered by the system.

When you drill down another level, you see that the duration to obtain requirement results varies significantly between vendors. This data presents an opportunity for you to improve vendor performance.

All dashboards can interface with internal and external systems, and you can easily export data for reporting.
