

SUPPLY CHAIN SCENARIO PLANNING WITH SAP INTEGRATED BUSINESS PLANNING

VIDEO TRANSCRIPT

Now, despite challenges and disruption, your supply chain needs to keep moving and timely deliver the goods and services to your customers.

Next, your supply chain and operations need to become more customer-centric and resilient to outmaneuver uncertainty.

Accenture can help through the Supply Chain Scenario Planning-as-a-Service, powered by SAP Integrated Business Planning.

Information from the client systems will be extracted, and then loaded in an SAP IBP environment.

The solution taps into the power of analytics to provide critical supply chain scenario simulations, evaluate the challenges in the supply chain and help businesses act proactively and swiftly.

With our IBP industry models in myConcerto, our digital platform for intelligent enterprise transformation, we can quickly enable supply chain planning in your industry context.

We can activate a working model in 4 to 6 weeks, take swift actions to stabilize and build a stronger and more resilient supply chain, and increase your capability to outmaneuver uncertainty.

Our solution helps you to reduce simulation time for scenario planning from days to hours.

It gives you better end-to-end visibility into your supply chain and simulates revenues and costs for each scenario.

This can improve your decision making and speed to market, and can give you new insights to start defining the roadmap towards future capabilities that further optimize supply chain planning.

The result? A more agile, flexible and resilient supply chain that can adapt more quickly to industry changes.
