

ACCENTURE DEVOPS

AUTOMATION FOR SAP ON MICROSOFT AZURE

When it comes to SAP there's no question that cloud is critical, but do you have all the answers?

How fast can you move and realize business benefits from your investments in SAP?

What's the best path for moving landscapes on Microsoft Azure?

How can you transform with technology, and gain the agility, scalability and rapid innovation that represent successful operations in the digital age?

Our solution?

Accenture DevOps Automation for SAP on Microsoft Azure.

These market-leading tools allow you to automate, orchestrate and implement in an agile way.

They also aid in landscape life-cycle management of your SAP estate, with enhanced efficiencies, lower infrastructure costs and supervised automation.

Now you can transform the core, moving to Intelligent Operations through rapid, effective migration of SAP landscapes to Azure.

The only flexible integrated platform that offers productivity gains through Infrastructure as a Service and administrator workplace modernization, it brings scalability for increasing workloads—on-demand landscapes can be deployed with ease, in hours.

In addition, there's enterprise-grade security and compliance out of the box and innovation accelerated by leveraging artificial intelligence, DevOps, self-healing algorithms and analytics.

This combination of Accenture, Microsoft and SAP matches our unique proposition to your individual journey, so you can benefit from:

- Complete control, governance and visibility
- Increased speed to market
- Higher quality, standardization and cost efficiency

Freeing up investment for innovation and growing your competitive advantage.

For NextGen capabilities, unprecedented consistency, improved ROI and impactful business results, choose Accenture DevOps Automation today.
