

# Audit Report.

Mobile Network Performance  
in Canadian Markets in 2024

# Drivetest campaign — Intro

The leader in mobile benchmarking, umlaut, has analyzed the mobile networks in Canada with regards to mobile network performance. This audit report was commissioned by Rogers.

umlaut tested and evaluated the performance of voice and data services using Samsung Galaxy S23 Ultra devices, benchmarking the typical user experience on Canadian networks.

The testing was conducted in cities and towns as well as on connection roads, using a moving vehicle for drive testing between 19.03.2024 and 26.07.2024.

As the de-facto industry standard, our benchmarking methodology focuses on customer-experienced network quality and covers a wide range of mobile services.

Today, more than 200 mobile networks in more than 120 countries are being evaluated by our unique scoring methodology.

It allows a technical analysis that is unprecedented in its level of detail and enables comparisons between the network performance and capability of each mobile network. Our public benchmarks as well as the certificate benchmarks help network operators to demonstrate how well they are delivering wireless connections to consumers, business users and enterprises and reveal areas of improvement.

## umlaut Test Details

Test Devices – Voice & Conversational App	Samsung Galaxy 23 Ultra
Test Devices – Data	Samsung Galaxy 23 Ultra
Samples	Voice: 46202 — Data: 375534
Test Type	Drive Test (in vehicle testing)
Test Dates	58 measurement days, 19.03.2024 – 26.07.2024

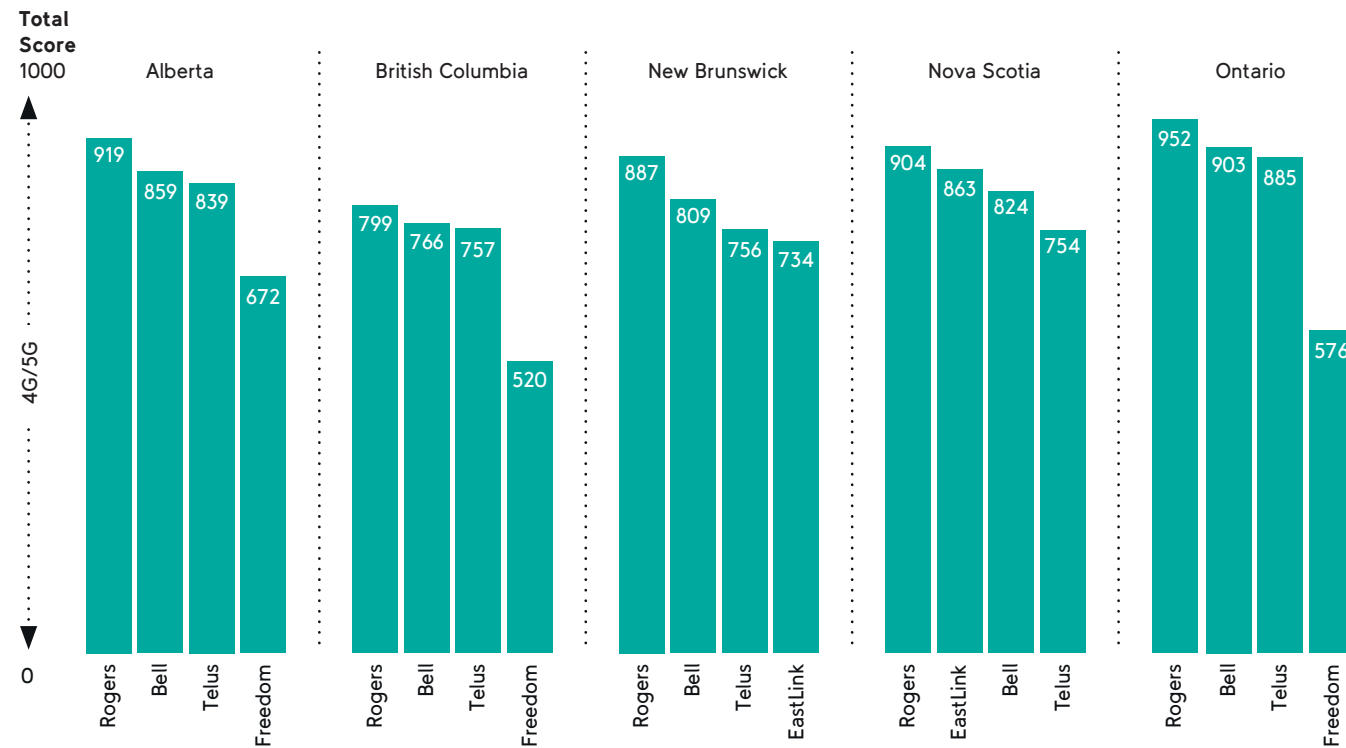

# Reported area

# Provinces — Score Overview

Overall results

Achieved score according to umlaut's methodology.

# Provinces — Reliability Overview

Overall reliability

The graphs show the overall session reliability of the mobile networks according to umlaut's methodology.

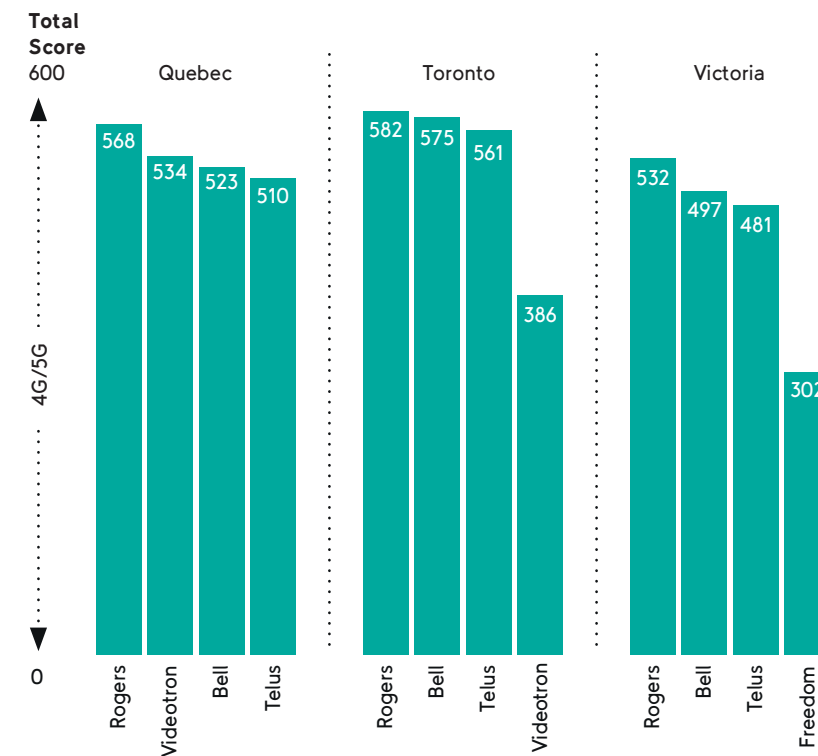

# Cities — Score Overview

## Overall results

Achieved score according to umlaut's methodology.

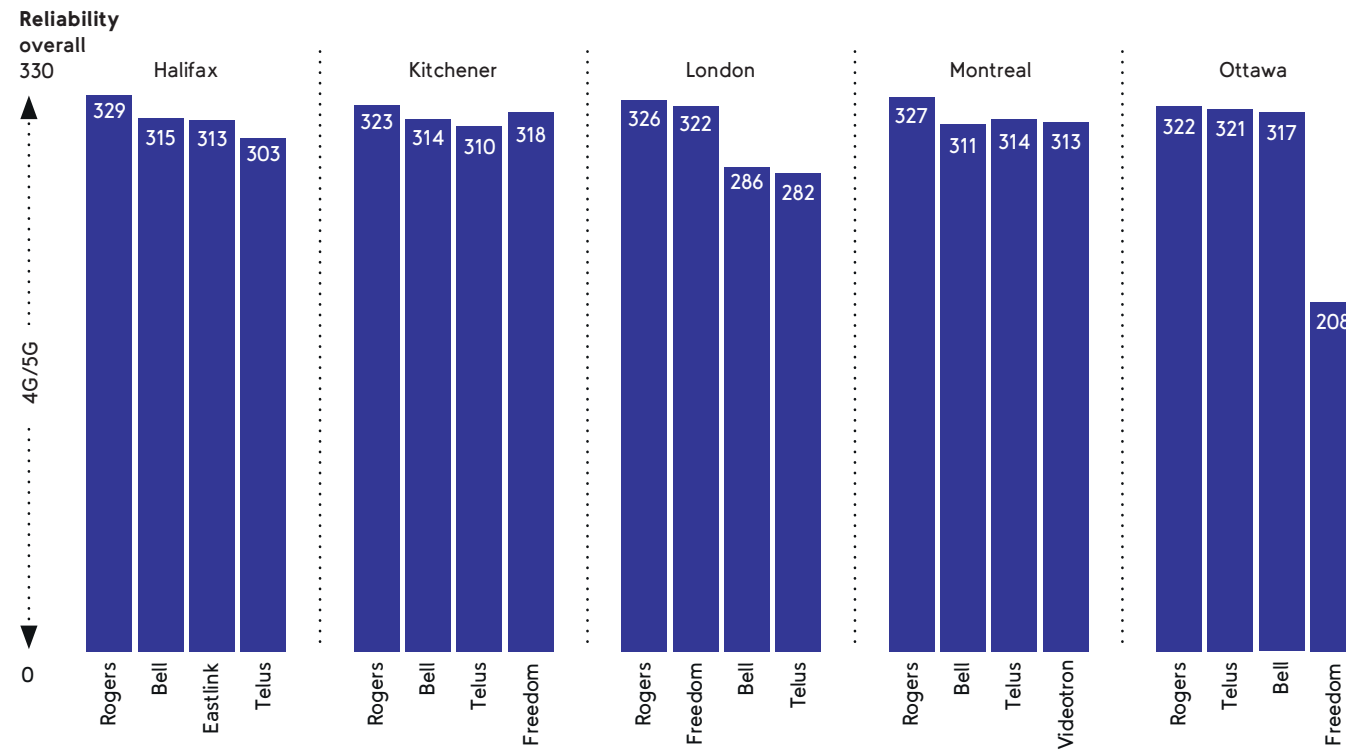

Achieved score according to umlaut's methodology.

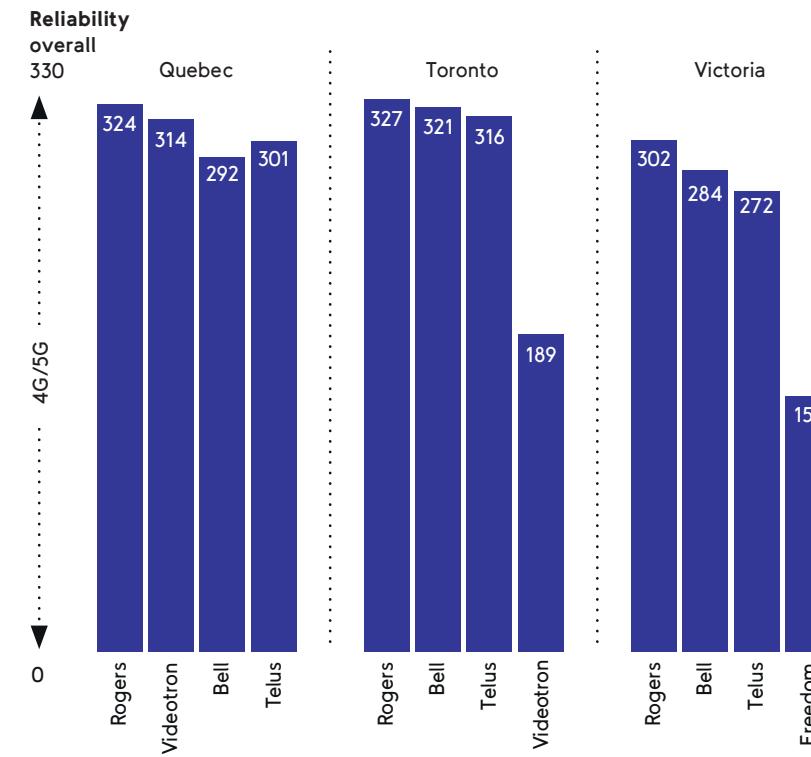

# Cities — Reliability Overview

## Overall reliability

The graphs show the overall session reliability of the mobile networks according to umlaut's methodology.

The graphs show the overall session reliability of the mobile networks according to umlaut's methodology.

## Key takeaways

- ❑ Rogers leads in the provinces of Alberta, British Columbia, New Brunswick, Nova Scotia and Ontario in overall mobile network performance and has the highest reliability in these provinces.
- ❑ In the cities tested, Rogers achieved the highest overall score and had the highest reliability in Montreal, Ottawa, Toronto, Halifax, Kitchener, London, Quebec and Victoria.
