

Scrambling HR data in your non-productive instances

Create reliable, meaningful, and authentic test data for SAP® SuccessFactors® solutions.

CHALLENGES

SOLUTION

Integrate Accenture Clone and Test for Cloud with SAP SuccessFactors solutions to:

Achieve consistent data testing across your hybrid landscape consisting of SAP SuccessFactors and SAP ERP Human Capital Management solutions.

Create test data by copying and anonymizing a subset of employees from production to QA.

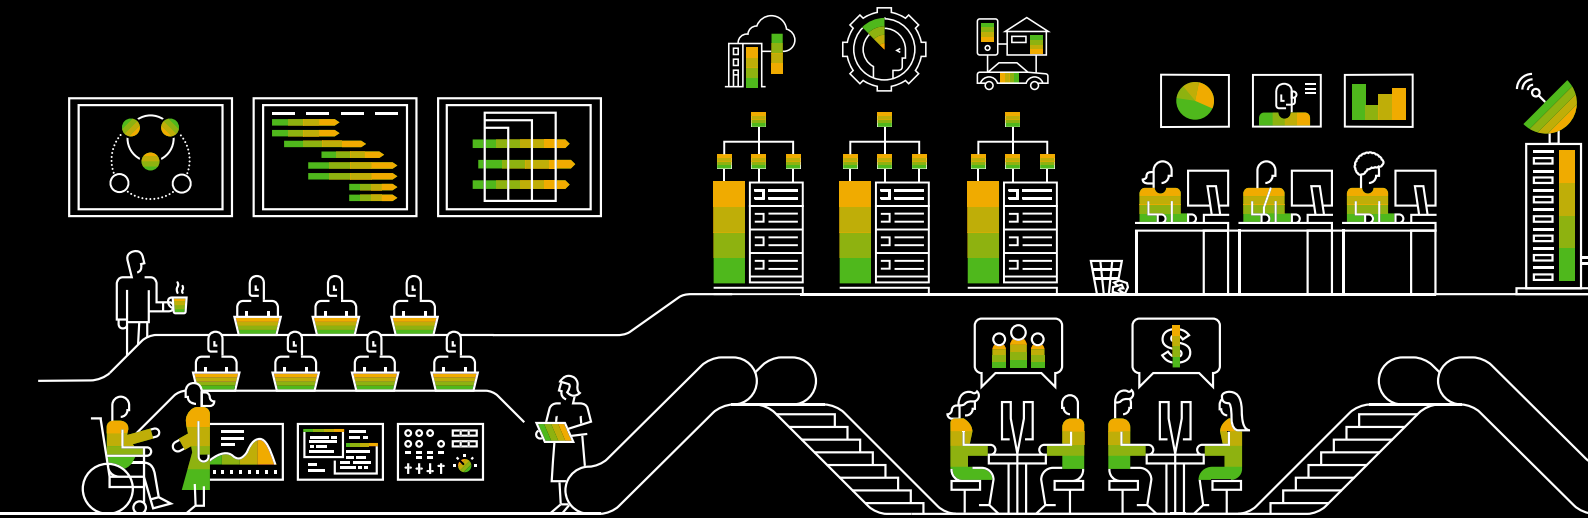

Anonymize data in place by scrambling live data in QA after a system refresh.

Replicate production errors by copying employee data in a realistic but safe data environment in QA.

Maximize test data for performance tests by multiplying existing test data within one instance.

BENEFITS

Accelerate and simplify your employee data testing to:

Enhance the speed, quality, and efficiency of testing

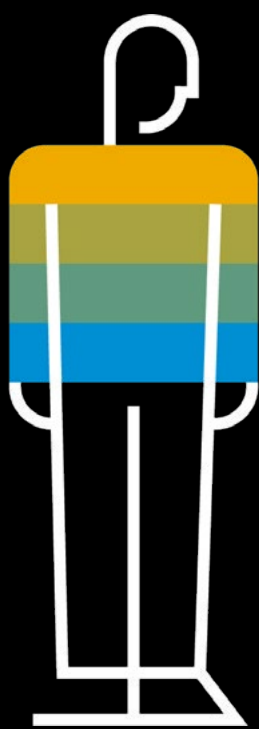

Improve HR system management and productivity

Protect employee confidentiality and improve data regulation compliance

EVIDENCE

Reduce the time and effort needed to generate reliable test data:

When we went live, the solution was very much welcomed and applauded by the business, leadership teams and HR IS partners – as it was aligned with the organization's vision of automated solutions, reducing manual interventions and supporting GDPR.

We've chosen **Accenture's Clone and Test for Cloud** because it is tightly integrated with SAP's cloud platform. And it comes with rules to scramble the HR data inside SAP SuccessFactors solutions.

Abhishek Godavarthy, Manager – People Systems, Reckitt Group
