# Speed to market with RISE & SAP S/4HANA® Public Cloud SOAR with Accenture accelerates implementation

### Call for change

BUMA Australia acquired Open Cut Mining business from Downer EDI, a divestiture and business separation. Enterprise capabilities are currently managed by Downer Group. A migration needed to be facilitated to transfer the ownership to BUMA and establish standalone legal, HR, finance functions and teams. There is a need for greenfield ERP transformational program which will enable BUMA to simplify and standardise business processes and consolidate technology with a cloud first approach.

Additionally, there is a significant number of applications and integrations that form the current technology landscape. It is a goal to reduce the complexity of this landscape and total cost of ownership with an overall architecture that aims to reduce the number of unique point solutions by 50%.

### When tech meets human ingenuity

Accenture worked with the client to establish a vision and plan, ultimately selecting **RISE with SAP S/4HANA® Public Cloud**. Accenture is providing Enterprise ERP for Implementation Services and SAP RISE S/4HANA Public Cloud ERP software to deliver a single Software-as-a-Service based platform to cover end-to-end, Finance, Procurement, HR and Asset Management across all BUMA sites. Digital automation will be introduced in areas that lead to cost control, yield or optimisation such as payload monitoring, predictive maintenance and workforce planning.

This will be achieved by the implementation of a simple and consistent architecture, an SAP® platform strategy for the core digital business, leveraging industry standards and out of the box solutions. A cloud first approach to support scalability and standardisation was also applied, supporting lower TCO.

### A valuable difference

By leveraging SAP S/4HANA Public Cloud, BUMA can meet business objectives:

- Complete the migration of complete IT, OT and Infrastructure landscape in 9 months and exit the Technical Services Agreement on time.

- Increase automation and simplify business processes to harmonised best practices on SAP.

- Establish strategic solutions set to enable business growth with SAP S/4HANA Public Cloud at its digital core – supporting the goal of doubling the business within the next year.
